B'cont

Fig. 26 is an exemplary embodiment of the display device used for a television.

Docket: 0756-1915

B2

Page 36, after the last line, insert -- Fig. 26 illustrates the display device used for a television. In particular, the television 300 comprises a display device 310 and a tuner 320.--

In the Claims:

1. (Amended) A display device comprising:

a substrate having an insulating surface;

at least one thin film transistor formed on said insulating surface, [e] said thin film transistor having a semiconductor film comprising silicon as an active layer thereof;

an interlayer insulating film comprising an inorganic material formed on said thin film transistor;

a first contact hole in said interlayer insulating film;

a wiring formed on said interlayer insulating film and electrically connected to said thin film transistor through said first contact hole formed in said interlayer insulating film;

a leveling film comprising an organic resin to provide a leveled upper surface over said thin film transistor;

a second opening through said leveling film and said interlayer insulating film; and

a pixel electrode formed over said leveled upper surface and directly connected to said semiconductor film of said thin film transistor through said second opening,

wherein an edge of said leveling film at a periphery of said second opening is rounded.
